

Development which meets the needs of the present generation without compromising the ability of future generations to meet their own needs.

At Airconaire Ltd our core business is the design, manufacture, installation and maintenance of air conditioning systems and their associated ductwork, heating and control panels.

Company management recognise the importance of protecting the environment and that our operations have a number of environmental effects.

Our commitment is to:

Manage our significant environmental impact responsibilities in order to prevent pollution and attain continual improvement in our environmental performance. We aim to ensure full compliance with all relevant environmental legislation and industry standards.

We will periodically review our environmental performance and set targets for environmental improvement. We will encourage all employees and sub-contractors to be aware of the environmental consequences of their actions, and expect them to be actively involved in our environmental programme.

In order to achieve this we have teamed up with the BE&S, BESCA, Low Carbon Consultants, S.T.E.M, REFCOM Elite and BM TRADA Inspection and Assessment.

To meet our commitments we will:

Ensure that appropriate contingency plans exist for emergency situations or uncontrolled releases.

Ensure that our risk assessments include consideration of the potential for environmental damage.

Integrate environmental matters into our employee induction and training programme.

Use our resources efficiently by maintaining control over our purchasing, storage and working procedures.

Minimise waste by re-using and recycling materials where practicable and dispose of all non-recyclable waste in a fit and proper manor.

Investigate the environmental effect of regularly purchased materials and consider using alternative materials which are less damaging to the environment.

Minimise vehicle emissions by careful use and maintenance of vehicles to ensure efficiency; planning of journeys and promoting careful driving techniques.

This statement represents our position on environmental issues and the policies and practices we will apply in conducting our business. It will be reviewed annually or in light of any organisational or operational change.
